

MEET THE VISIONARIES

A Summary of Muhammad Hassan

HEAD OF ENGINEERING

Muhammad Hassan is the Head of Engineering at BIM Africa, with professional experience spanning software development, web and application development, database systems, API development, system integrations, automation and the delivery of complete technology solutions for modern businesses.

He holds a **BS in Computer Science** from **Government College University Faisalabad (GCUF)** and is currently pursuing an **MS in Computer Science** at **GCUF**, further developing his expertise in advanced computing, software engineering, modern technologies and computer science.

Hassan's technical expertise covers the **complete software development lifecycle**, from requirements analysis and technical planning through architecture, development, testing, deployment, maintenance and continuous improvement. He works across both front-end and back-end technologies to build scalable, secure, maintainable and user-focused digital solutions.

His core technical expertise includes **React.js, Next.js, JavaScript, TypeScript, Node.js, Express.js, MongoDB, SQL and NoSQL databases, Supabase, REST APIs, authentication systems, third-party API integrations, cloud-based services, responsive interfaces and modern web development technologies.**

His experience includes developing **business and corporate websites, e-commerce platforms, web applications, custom software systems, administrative dashboards, management systems, customer portals, real estate platforms, quotation systems, CRM-related solutions, data-driven applications, authentication and user management systems, reporting systems and business automation solutions.**

Hassan also works extensively with **backend services, REST APIs, database architecture, authentication and authorization, payment and third-party services, cloud storage, analytics, automated workflows and external API integrations**, connecting the different components of modern software ecosystems.

As Head of Engineering at **BIM Africa**, Hassan leads the technical development and continuous improvement of the company's digital solutions. He translates business requirements and operational needs into practical technology solutions while overseeing areas including **software architecture, front-end and back-end development, database design, API development, integrations, testing, debugging, deployment, performance optimisation, security and maintenance.**

His approach goes beyond individual website development. He focuses on building complete technology systems that are **reliable, secure, scalable and maintainable**, while using automation and integrated technologies where appropriate to improve business processes and reduce manual work.

Through his role at BIM Africa, Hassan combines technical leadership with hands-on engineering to develop technology-driven solutions that solve real business problems and provide long-term value to the company and its clients.
